Vadmin 3.0 Registration and Security

Vadmin 3.0 Registration and Security provides a single centralised login and registration point for website users.

It allows users to sign up to a website, newsletters or other items, and controls the access and security of specific sections and pages within a website.

Key Benefits

Improved security
Vadmin 3.0 Registration and Security allows you to restrict access and secure your website right down to an individual page level.

Save time
Signups and response emails are automated reducing the time you need to spend managing users.

Improved marketing
Create a centralised store of user data that can be used to generate marketing demographics, targeted email send outs and more.

Key Features

- Allows the website to remember the user via cookies

- Allows users to sign up (online form) and edit their details

- Supports automatic acceptance, conditional and permission based sign ups

- Email addresses are confirmed through the signup process

- All user information is stored in a central SQL database

- Security access is role based. There can be multiple levels of access controlled by roles

- Consists of four interfaces at the front end; sign up (register), sign in (login), forgot my password and edit my profile

- Easily integrates with all Vadmin 3.0 systems

- Easily integrates with online payment solutions

Technology

Vadmin 3.0 utilises the latest and most reliable technologies available.
Built in ASP.NET, it is a 3-tier architecture developed in a 100% managed environment. It employs an SQL database back-end, and an ASP.NET Application Server front-end.
